

TECHNICAL SERVICE INFORMATION

Pulita 2000*

SUPER AQUEOUS COATING AND FLEXO INK CLEANER

DESCRIPTION

PULITA 2000 is a uniquely formulated biodegradable, odorless, water based cleaner. It is non-flammable and non-hazardous with very low VOCs. It is designed to effectively remove dried residual ink and coating film deposits that build up under Doctor Blades, and coating & ink surfaces.

PULITA 2000 will prevent engraved roller cells from building up and plugging with residual ink and coating film commonly left behind with traditional type washes. It prevents coating and ink build up under Doctor Blades, which will cause surface scratches to the engraved cylinder.

PULITA 2000 will dissolve and remove coating film and ink residue allowing for consistent volume of coating and ink material to release out of the engraved cells during application.

PULITA 2000 meets applicable U.S. and Canadian environmental regulations and is user friendly.

DIRECTIONS

Coating Applications: For aqueous coating applications it is recommended that Pulita 2000 be applied full strength to coating blankets and rollers in a normal wash-up manner until wash-up is complete.

Flexo Ink and Automatic Wash System Applications: For Flexo ink and automatic wash applications it is suggested to start with a solution of 1 part water to 1 part Pulita.

Photopolymer Plate Applications: For photopolymer plate applications it is suggested to dilute Pulita with water starting at 2 parts water to 1 part Pulita.

Back Cylinder Applications: For back cylinder applications apply Pulita to the back cylinder for the effective removal of ink and paper build up.

SPECIFICATIONS

FLASH POINT >200°F
Cleaning Strength Strong
VOCs 1.6 lbs./gal
Personal Protection Glasses and Gloves
